Version Control

Joe Corona

CS 480

Version control is pretty neat because it is good practice to have especially for when I work in the industry. That is one of the things that they use to control their software. This is great because it allows me to know every single change that I have made to my project. So that in the future I could come back and know exactly what I was doing before I stopped for the night.

Now we have to get on with the disadvantages. It will not always be obvious as to who did the most recent change. The file locking trait won't allow different developers to work on the same code at the same time. Sometimes it can slow down the developmental process.
